

REVITALGEN

HIGHLY ACTIVE IMMUNOMODULATORY ENZYMES

Revitalgen consists of acid, neutral, alkaline, exo/endo proteases, bromelain and papain. These proteolytic enzymes are active in a wide range of pH's, are gastrointestinal stable and functional, and have been specifically selected for their synergistic activity in the digestive tract as well as systemically for therapeutic health related applications.

Protease

One of the most well-established functions served by the oral proteases in this blend is the maintenance of normal blood flow.* Protease provides vital systemic benefits, including the support of adequate blood rheology for the optimum flow of immune cells and their mediating molecules, hormones, blood cells, and other vital molecules and cell. These benefits, in turn, facilitate and support a wide array of metabolic processes.*

Bromelain

A protease derived from the pineapple plant which has been used for many years as a digestive aid, as a burn debridement agent, and as an anti-inflammatory.* Its actions help to promote smooth muscle relaxation and may increase the absorption of medications.* Bromelain is also used to protect the stomach lining and sinuses, and for appetite inhibition.*

Papain

A highly purified extract of proteolytic enzymes from the Carica papaya that is very effective for the reduction of inflammation, and cytotoxin binding.* Papain can also be used for minor pain and may reduce gastric acid secretion to improve gut health.*
